

A complete package of specialty resin and antimicrobial treated floor coating systems for

DAIRY & CHEESE PLANTS

Welcome to Flowcrete India

Like most wet processing facilities, dairy and cheese plants can prove a challenging environment for unprotected concrete. Protective floor coating systems must offer sufficient chemical resistance to corrosive dairy fats, lactic acids and proteins as well as provide an anti-slip, easily cleaned and de-greased surface.

In addition, floors found in dairy and cheese processing facilities are subject to heavy forklift and pallet truck traffic as well as thermal shock conditions resulting from pressurised steam cleaning both of which can lead to mechanical damage.

Flowcrete India offers a complete package of specialty resin and antimicrobial treated floor coating systems designed to cater for all areas within dairy and cheese processing facilities.

HACCP International Certified Hygienic Flooring

Dairy and cheese plant floors are subject to spillage from water, milk, brine and whey. As such, they can present a slip and hygiene risk.

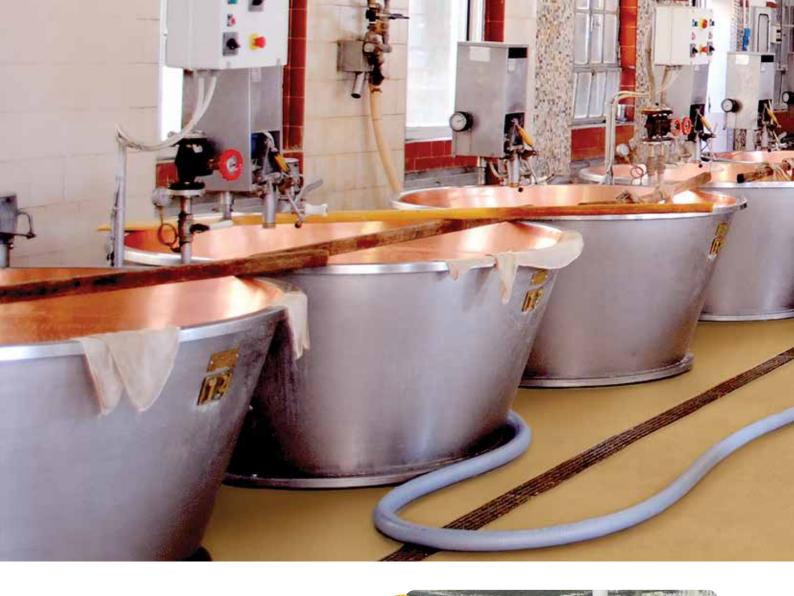

Resin flooring systems ensure a non-porous, smooth and seamless surface where there is nowhere for bacteria or mold spores to grow.

Flowcrete India's HACCP International certified and ISO 22196 compliant cementitious urethane flooring materials offer enhanced protection with the inclusion of Polygiene®, a silver-ion antimicrobial agent, designed to protect the surface from degradation caused by microbial growth.

How Does Polygiene® Work?

- 1 The silver ions are homogeneously distributed throughout the floor.
- The silver ions migrate to the surface.
- 3 They protect the surface from degradation caused by microbial growth.

Flowfresh RT (6-9 mm)

A heavy duty, chemical resistant, antimicrobial polyurethane resin floor screed providing a durable textured coloured floor finish. Flowfresh RT incorporates Polygiene® a performance based antimicrobial additive which inhibits the growth of bacteria.
